Center for Geotechnical Practice and Research
Annual Lecture Program

Thursday, February 23, 2006
Alumni Assembly Hall
Inn at Virginia Tech and Skelton Conference Center
Blacksburg, Virginia

8:15-9:00
David Pezza
US Army Corps - Chief’s Office
“An Overview of the Levee Assessment in New Orleans”

Performance of hurricane protection systems in southeastern Louisiana during hurricanes Katrina and Rita is of great current interest. The presentation will highlight specific efforts to assess levee performance, and the status of current interagency studies.

9:15-10:00
John Lessley, S&ME – Columbia, SC
and
Majid Tavakoli, Thompson Pumps
“Press Pit Foundation – Oriented Strand Board Plant, Fairfax, SC”

Construction of a 285 ft by 105 ft industrial press pit required a 44 ft deep excavation through clean sands, extending roughly 40 ft below the water table. Foundation soil compression and differential movements were evaluated for various stages of construction. Equally important was a plan for deactivating the dewatering system and backfilling the structure to limit the risk of hydrostatic uplift as construction progressed.

10:15-11:00
David Shiells
VDOT - Northern Virginia District
“Soft Ground Technologies – What Every Owner Should Consider”

As part of the $2.4 billion Woodrow Wilson Bridge Reconstruction mega-project, VDOT is using a wide variety of ground improvement and geo-technologies to reconstruct the Route 1 Interchange across extremely soft tidal marshland. The presentation will provide insight into the design decisions and philosophies, as well as some lessons learned during construction.

Keynote Speaker

11:15-12:15
Dr. William F. Marcuson III
ASCE President-elect
“ASCE – The Future”

Dr. Marcuson will be our plenary speaker, discussing changes under way to improve the effectiveness of ASCE in serving its members and the public. He was installed as the President-elect of ASCE in October 2005, and will serve as president beginning in October 2006. He joined the US Army Corps of Engineers Waterways Experimental Station in 1970, and served as Director of the organization’s Geotechnical Laboratory from 1981 until his retirement in 2000.

All are welcome to attend
